- 01 System and elements of interior signage**
- 02 Materials and colors of signage**
- 03 Schematic representations of elements**
- 04 Spaces in the branch**

# System and elements of interior signage

The interior signage system for branches is designed to support both traditional and digital signage elements, adapted to the branch concept and technical possibilities. The digitalisation of signage is an important part of the strategic direction, improving user experience and optimizing communication within the space.

# Schematic representations of elements

## Outline sign in space - branding

### Digital elements

- Display 10.1”” / office, signage
- Display 32” / information and notices
- Display 43” / promo
- Display 65” / exchange rate list and promo

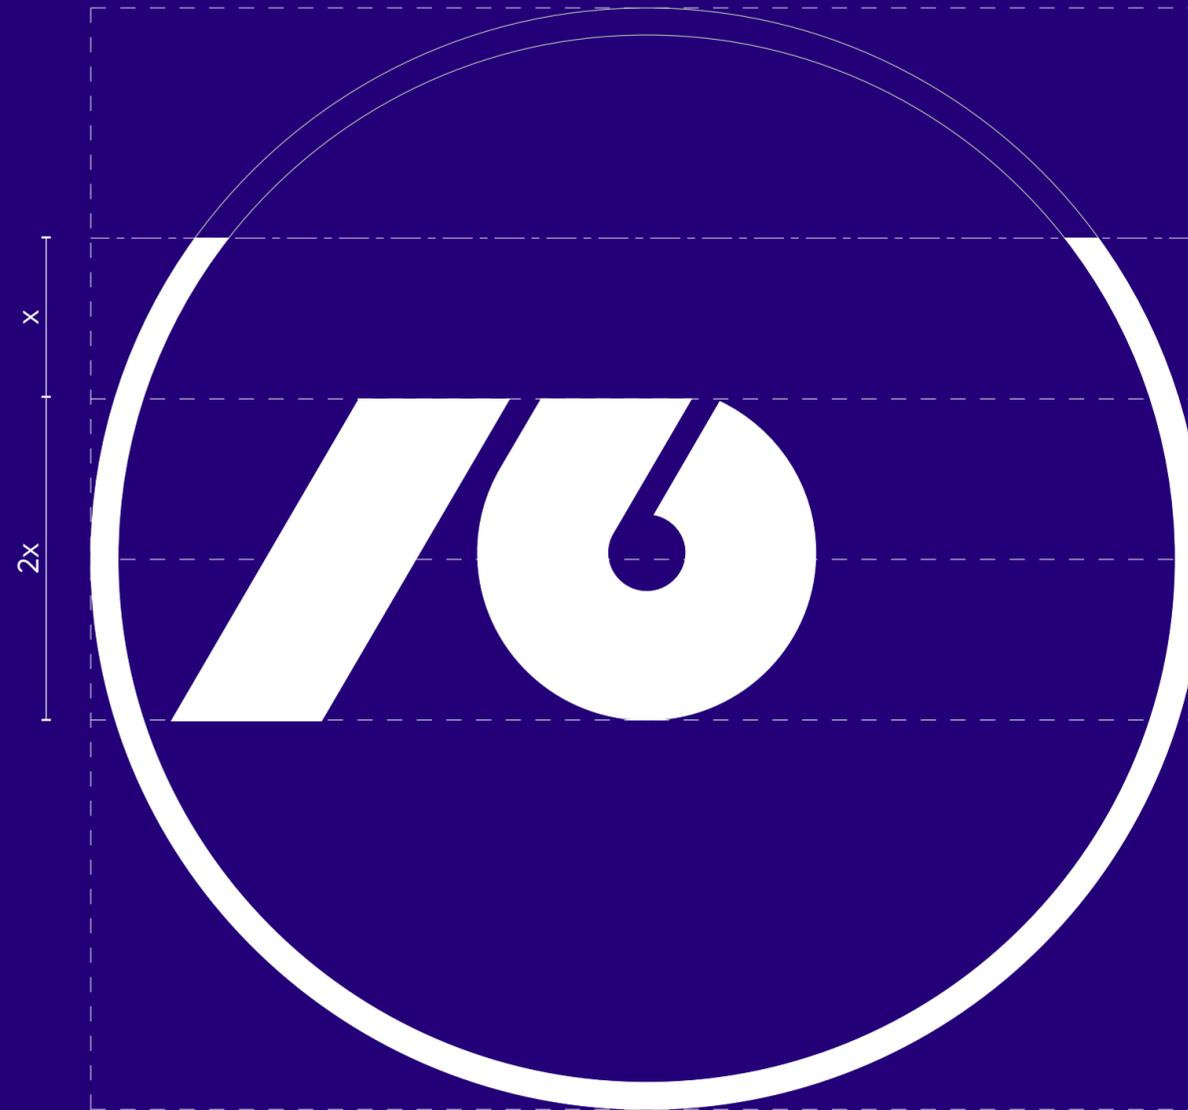

## **Outline sign in space – branding**

- 1 Use of the outline sign**
- 2 Implementation methods and backgrounds**

## Outline sign in space

### Use of the outline sign

The outline sign in the space is used in accordance with the display rules shown in the visualisation on the right.

#### Surfaces where the outline sign is used:

- Wall in the vestibule / ATM lobby
- Wall behind the cash desk
- Green wall (in vestibules without an ATM or as a decorative wall within the branch)

#### Surfaces where the outline sign is used:

- Background/surface around the ATM (section Vestibule/ATM lobby, page 40)

## Outline sign in space

### Size of the outline sign on the wall

The width of the sign is calculated based on the wall height using the formula:

**Width of sign = 0,53 × wall height**

The result is always rounded up to the nearest 10 mm.

Minimum sign width: 1400 mm

Maximum sign width: 1950 mm

#### Example:

Wall height = 3100 mm

$0,53 \times 3100 \text{ mm} = 1643 \text{ mm} \rightarrow 1650 \text{ mm}$

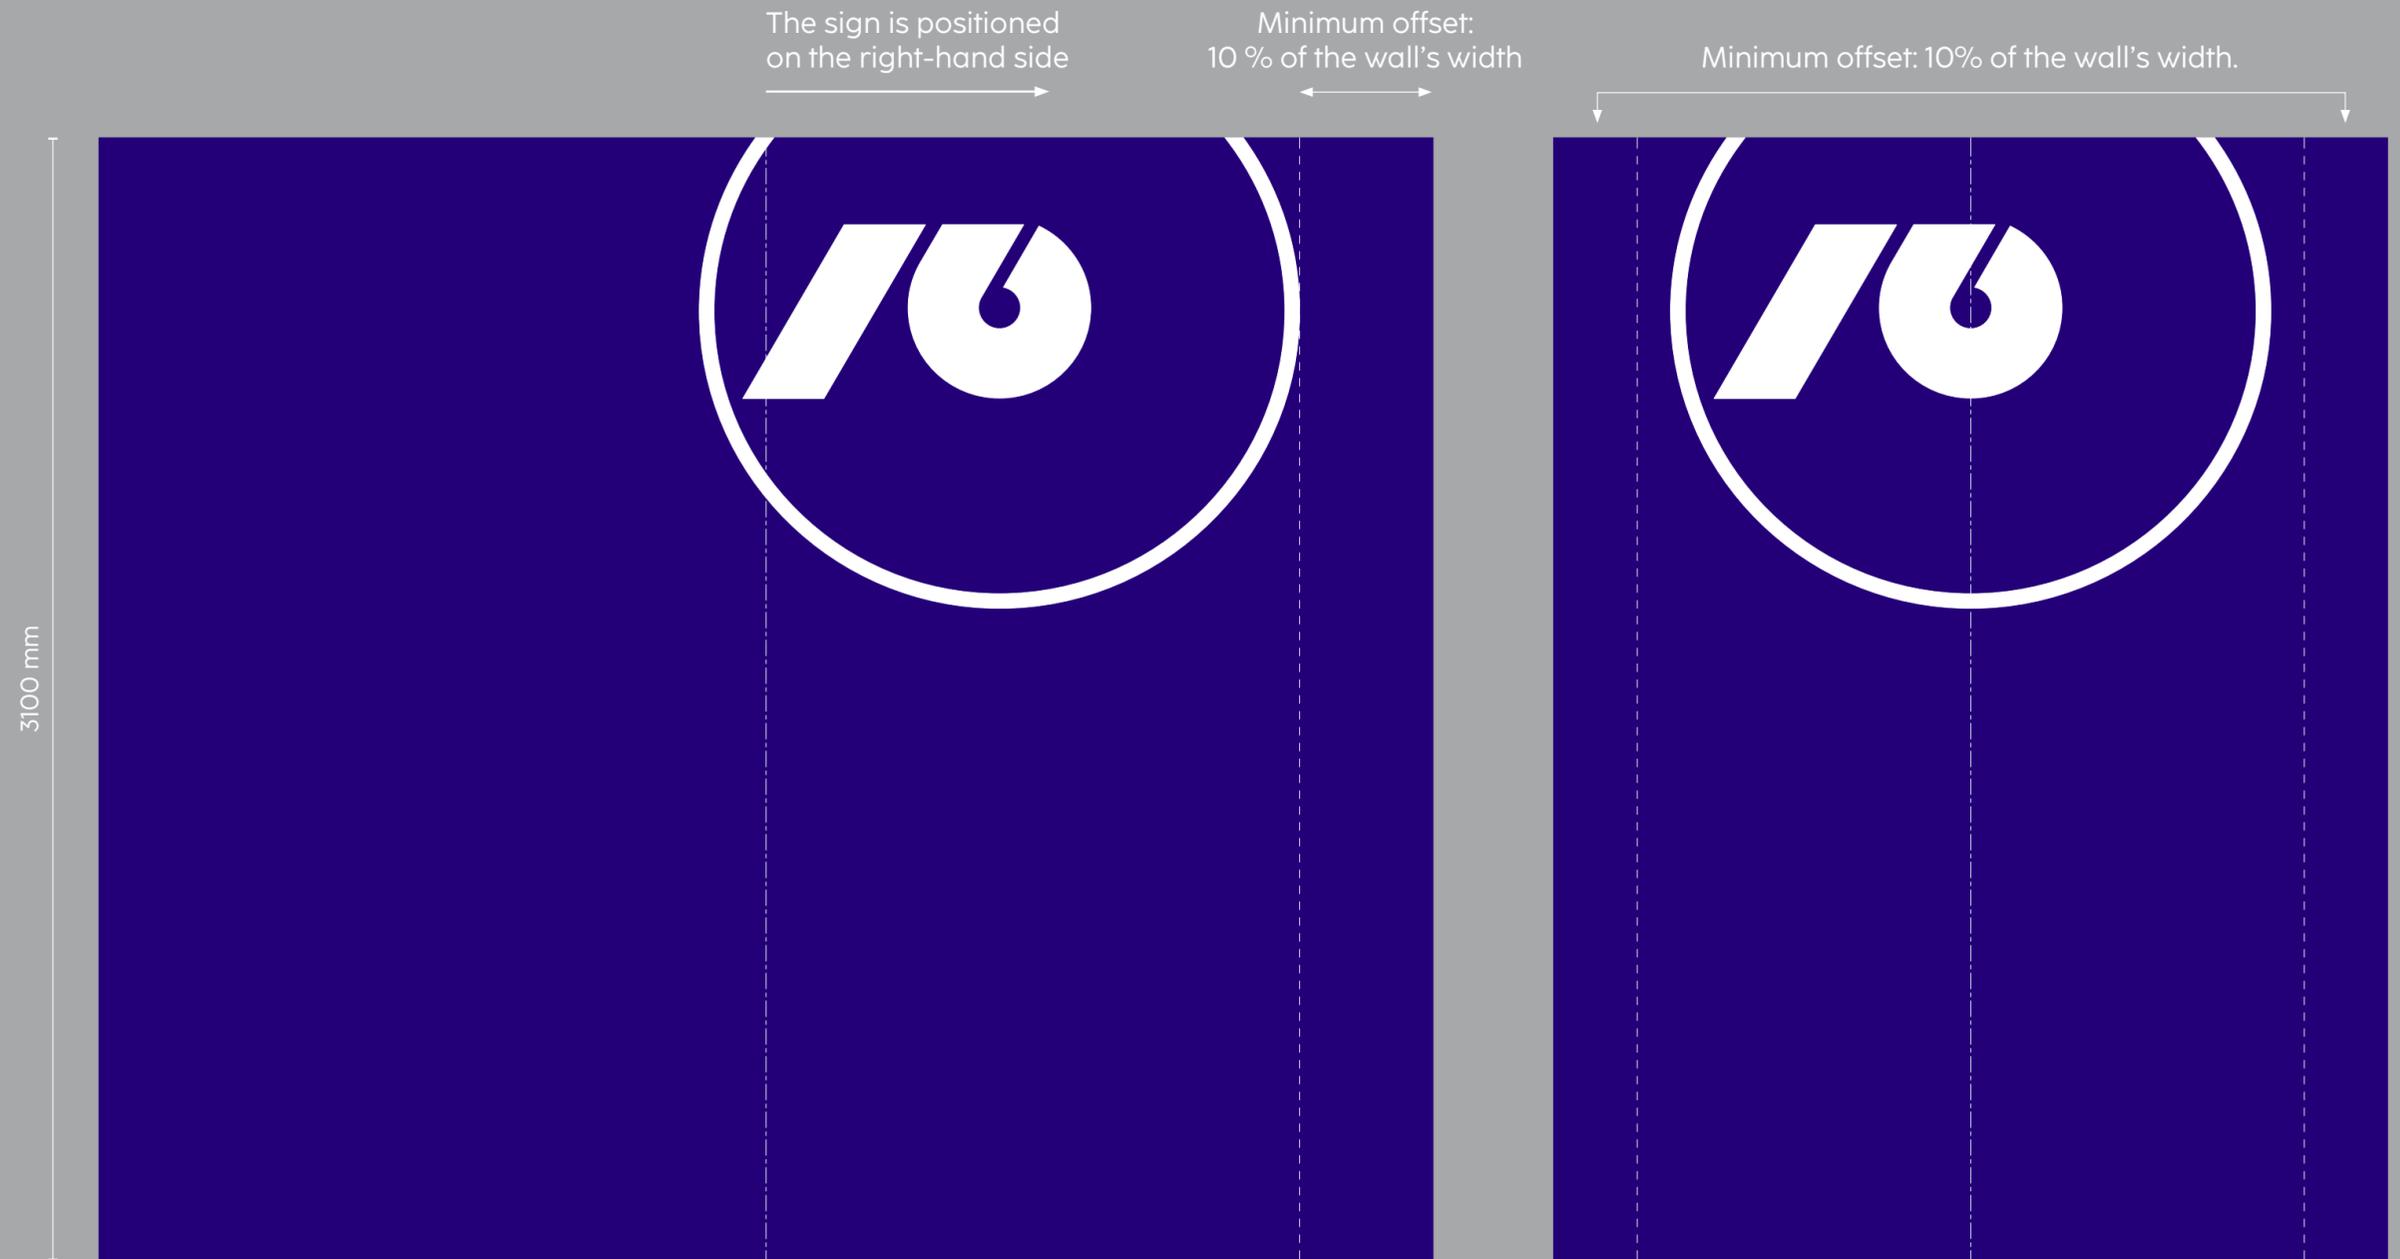

### Position of the sign on the wall

On a wider wall, the sign is positioned on the right-hand side, with a minimum offset of 10% of the wall's width from the edge.

On a narrower wall, the outline sign is placed centrally.

#### Note:

- On very wide walls (over 6000 mm), the position of the sign should be aligned with the location of the cashier desk or another element in front of the wall to ensure optimal functionality and visual harmony.
- These are basic recommendations; some spaces may have specific requirements that call for adjustments.

#### Wider wall

The sign is positioned on the right-hand side, with a minimum offset of 10% of the wall's width from the edge.

#### Narrower wall

The sign is positioned centrally, with a minimum offset of 10% of the wall's width from both the left and right edges.

## Outline sign in space

### Outline sign and service description

The size of the outline sign is determined according to the recommendations on the previous page.

If text is also added to the wall, the following recommendations apply:

- The recommended distance between the outline sign and the text is 600 mm.
- For narrower walls (less than 4000 mm wide), the distance may be reduced, but not to less than 300 mm.
- If, due to spatial limitations, it is not possible to provide at least 300 mm of spacing, only one element – either the text or the sign – is placed on the wall, depending on the requirements.
- For very wide walls (over 6000 mm), the position of the sign should be coordinated with the location of the counter or another element in front of the wall to ensure optimal functionality and visual balance.

#### Note:

These are general recommendations; certain spaces may have specific requirements that call for adjustments.

Minimum offset:  
10 % of the wall's width

Recommended distance: 600 mm  
Minimum distance: 300 mm

Minimum offset:  
10 % of the wall's width

## Outline sign in space

### Implementation methods

The outline sign can be produced in various ways. The choice of method depends on the space, its purpose, and the type of surface.

### Illuminated outline sign

The illuminated outline sign is made from a frameless profile with built-in, specified LED lighting, 60 mm thick. The front surface is made from the specified acrylic.

It is mounted onto the surface with spacers. Used on indigo blue backgrounds, wooden wall panels, or green walls.

### PVC

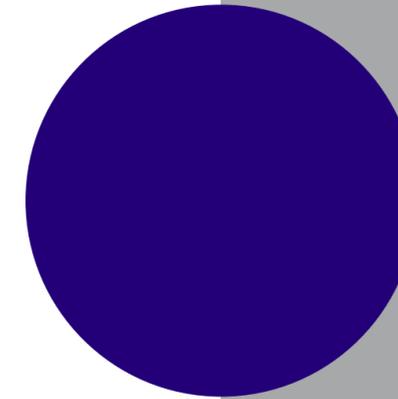

The PVC outline sign is a non-illuminated sign, cut from 20 mm thick PVC material. It is mounted on point spacers 10–20 mm from the wall, depending on the size of the sign.

Used on indigo blue backgrounds, wooden cladding, or green walls.

### White foil cut-out

The white foil outline sign is a non-illuminated sign, cut from white self-adhesive foil and applied directly to the wall.

Used on indigo blue backgrounds or wooden cladding.

### Backgrounds

#### Indigo blue background/surface

We usually use it in the vestibule/ATM lobby.

#### Wooden cladding

We usually use it on the wall behind the cash desk or in the vestibule lobby/ATM lobby.

#### Green wall

We use it in the vestibule when there is no ATM (when the space is accessible during branch opening hours) or as a decorative wall inside the branch.

## Digital elements

- 1 Display 10.1” - office, signage**
- 2 Display 32” - information and notices**
- 3 Display 43” - promo**
- 4 Display 65” - exchange rate list and promo**

## Digital elements

### Display 10.1" - signage

We use the display for office signage and for informing customers about the status or availability of the advisors.

#### The screen displays:

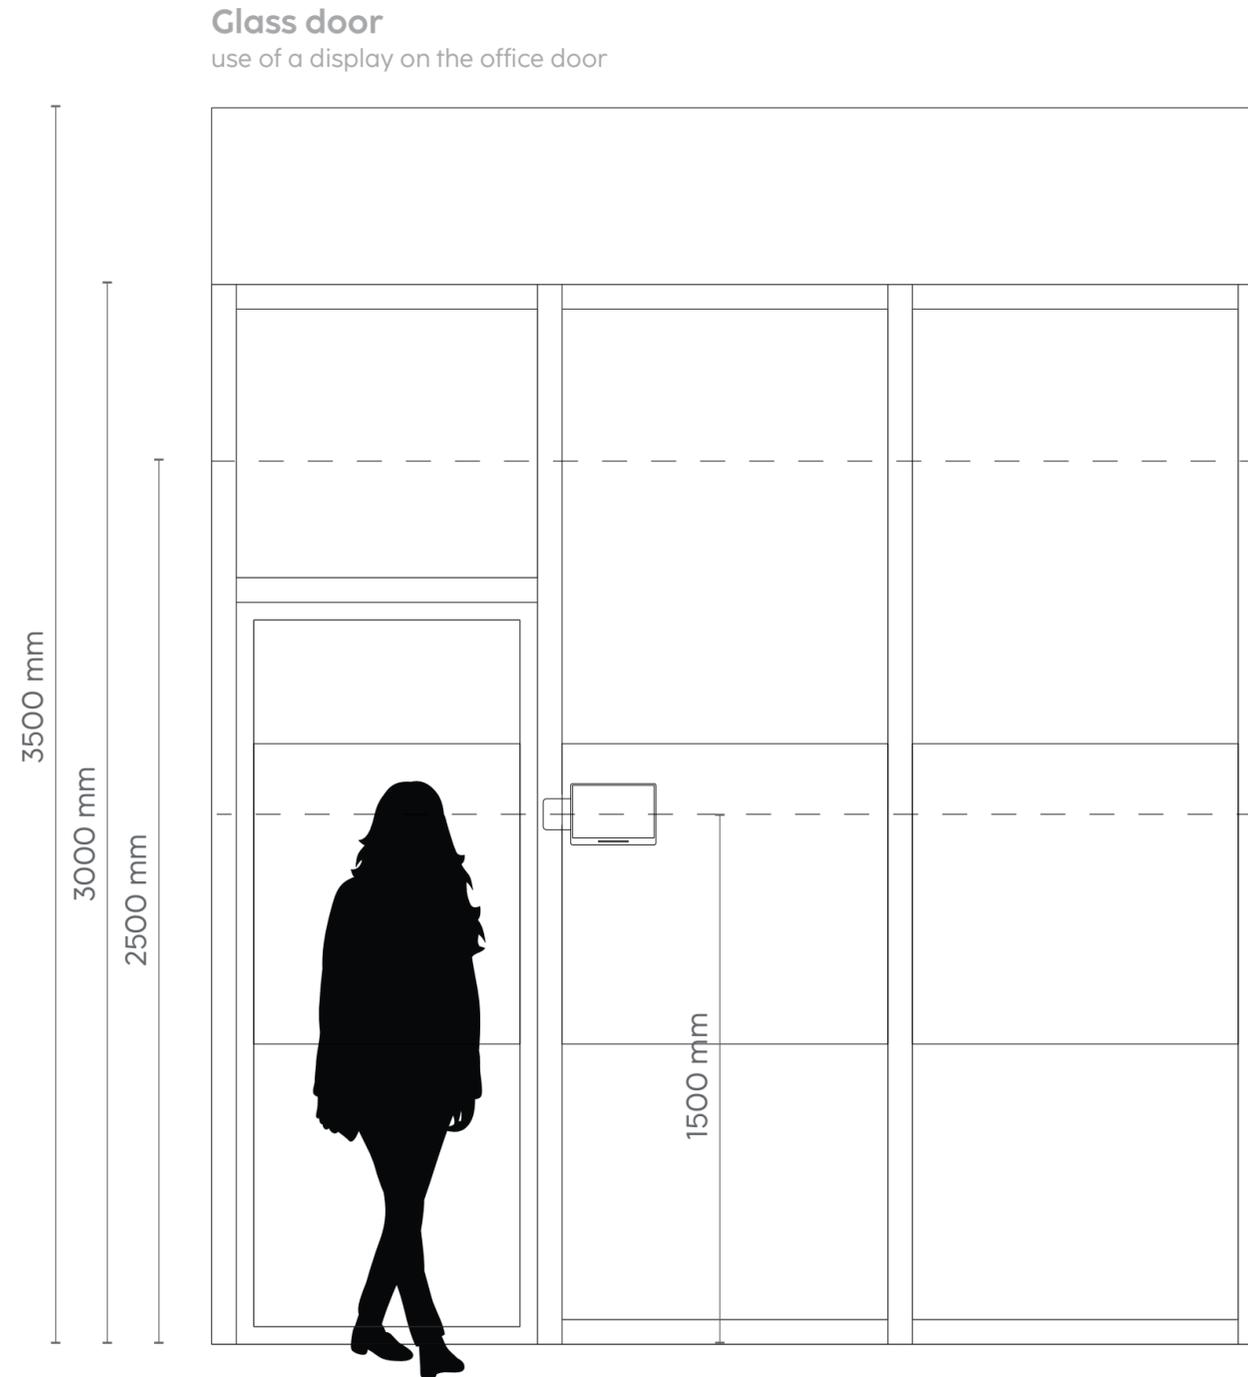

- the employee's first and last name,
- the workplace number.

The tablet is equipped with LED indicators:

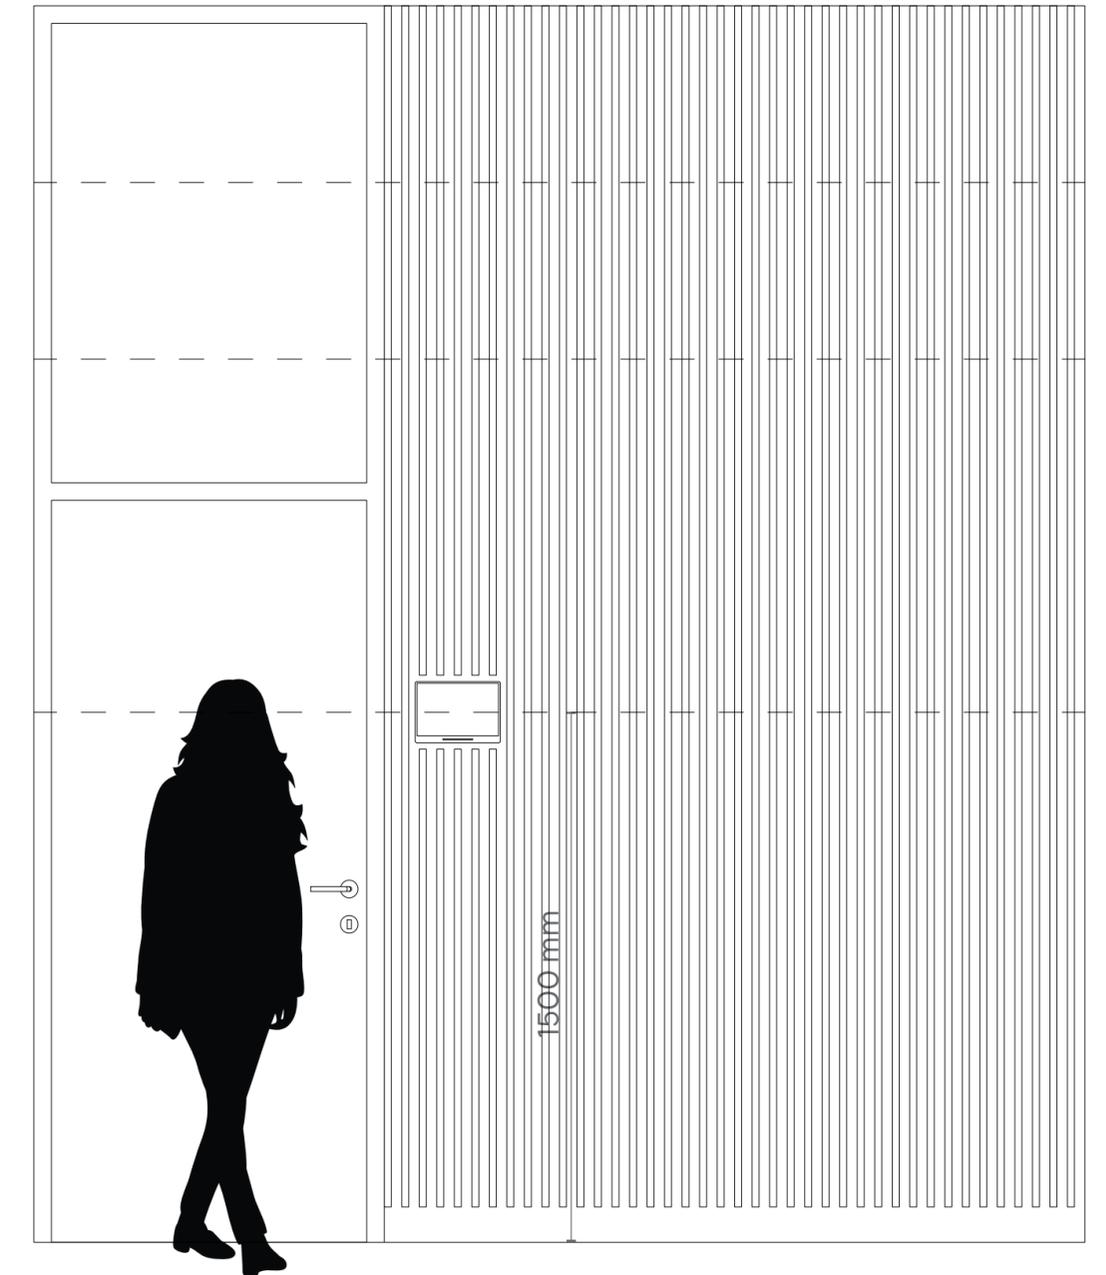

- green indicates an available advisor,
- orange indicates an occupied advisor.

Connection height from the floor: 1500 mm

The display is connected to the display 32" at the branch entrance, which shows the availability of advisors.

**Solid door (without glass surfaces)**  
use of a display next to the office door.

## Digital elements

### Film

- White foil, MacTac 9829-00

Potisni

### Display 10.1”

When installing the display, follow these rules:

1. Apply the specified foil onto the sandblasted film.
2. Place the polypropylene spacer onto the bracket.
3. Insert 4 screws into the holes of the bracket and spacer (the spacer is designed to prevent screws from falling out).
4. Screw the bracket onto the aluminium frame (window frame or door frame).
5. Connect the display to the UTP cable and check the correct cable length.
6. Place the cover onto the bracket.
7. As the final step, screw the display onto the bracket.

#### Note:

- The color of the cover is determined based on the color of the window frame.
- The UTP cable color should be white.

## Digital elements

### Display 32" - information and notices

We use the display 32" to inform customers about products, branch status, and to provide access to documentation.

The display is placed at the branch entrance and can be mounted in two ways:

#### Wall-mounted

It is recommended to integrate the display into wooden slats, ensuring it is flush with the slat surface.

#### Freestanding

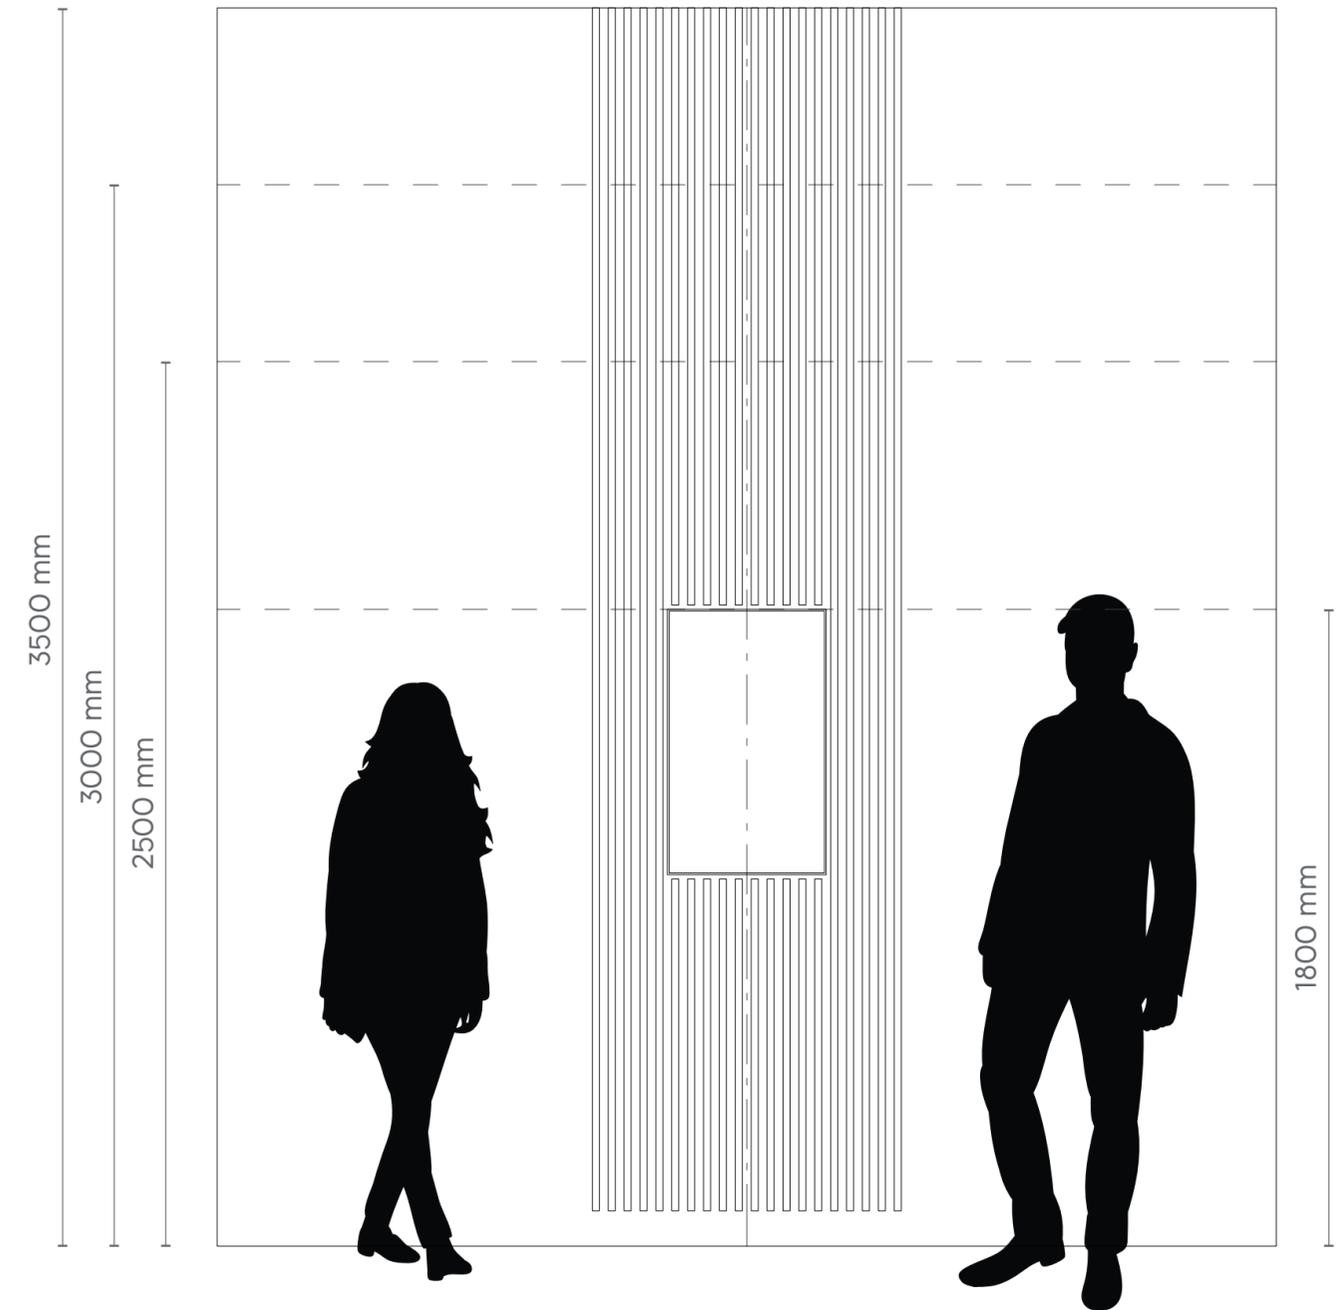

When wall mounting is not possible, the display is used as a freestanding element. The freestanding display can be single- or double-sided, depending on spatial possibilities and functionality.

Top edge height from floor: 1800 mm

Freestanding display

Wall-mounted display

## Digital elements

### Display 43" - promo

We use the display 43" to display promotional and advertising content.

Two versions are available:

#### Single-sided (freestanding or wall-mounted)

The display can be freestanding or wall-mounted. In the case of wall mounting, it is recommended to install it between the wooden slats. Make sure the display is aligned with the slat lines.

#### Double-sided

Used as a freestanding element in the space, allowing content to be displayed on both sides.

Top edge height from floor: 2100 mm

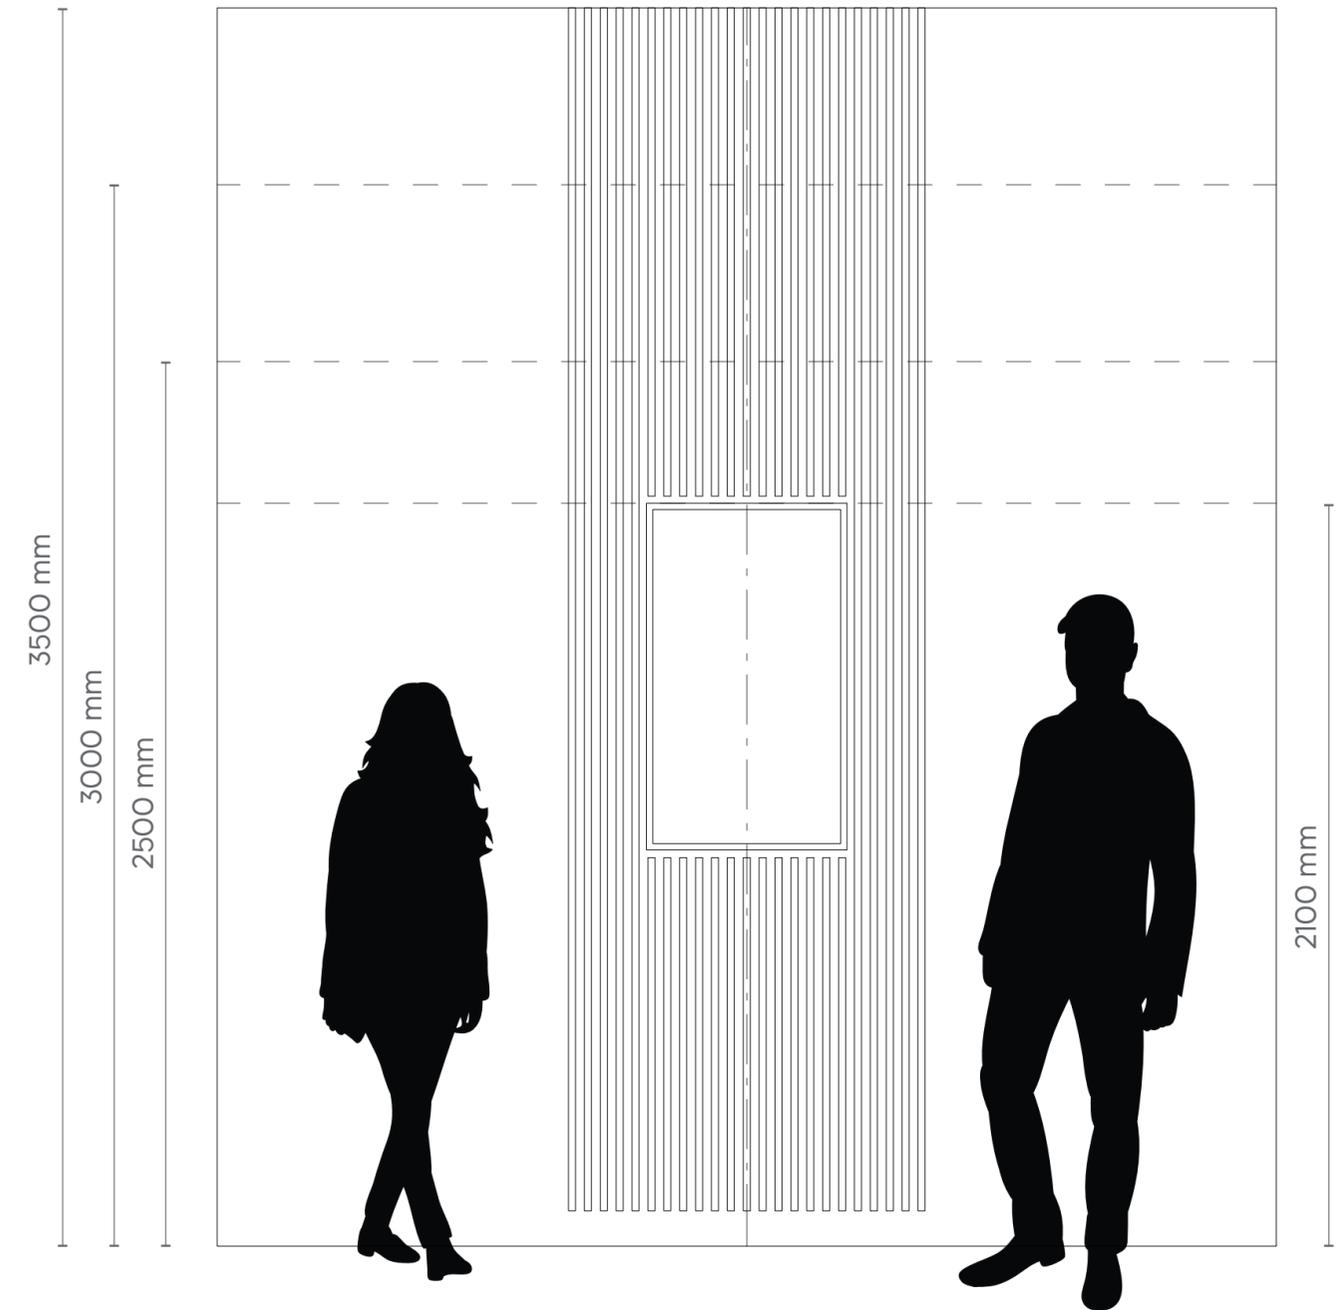

#### Note:

These are general recommendations; specific spaces may require adjustments.

Freestanding display

Wall-mounted display

## Digital elements

### Display 65" - exchange rate list and promo

We use the display 65" to display exchange rates and other promotional content, such as new offers, special deals, and customer information. The installation is adapted to the needs of each individual branch.

It is recommended to integrate the display into wooden slats, ensuring that the display is aligned with the slat lines.

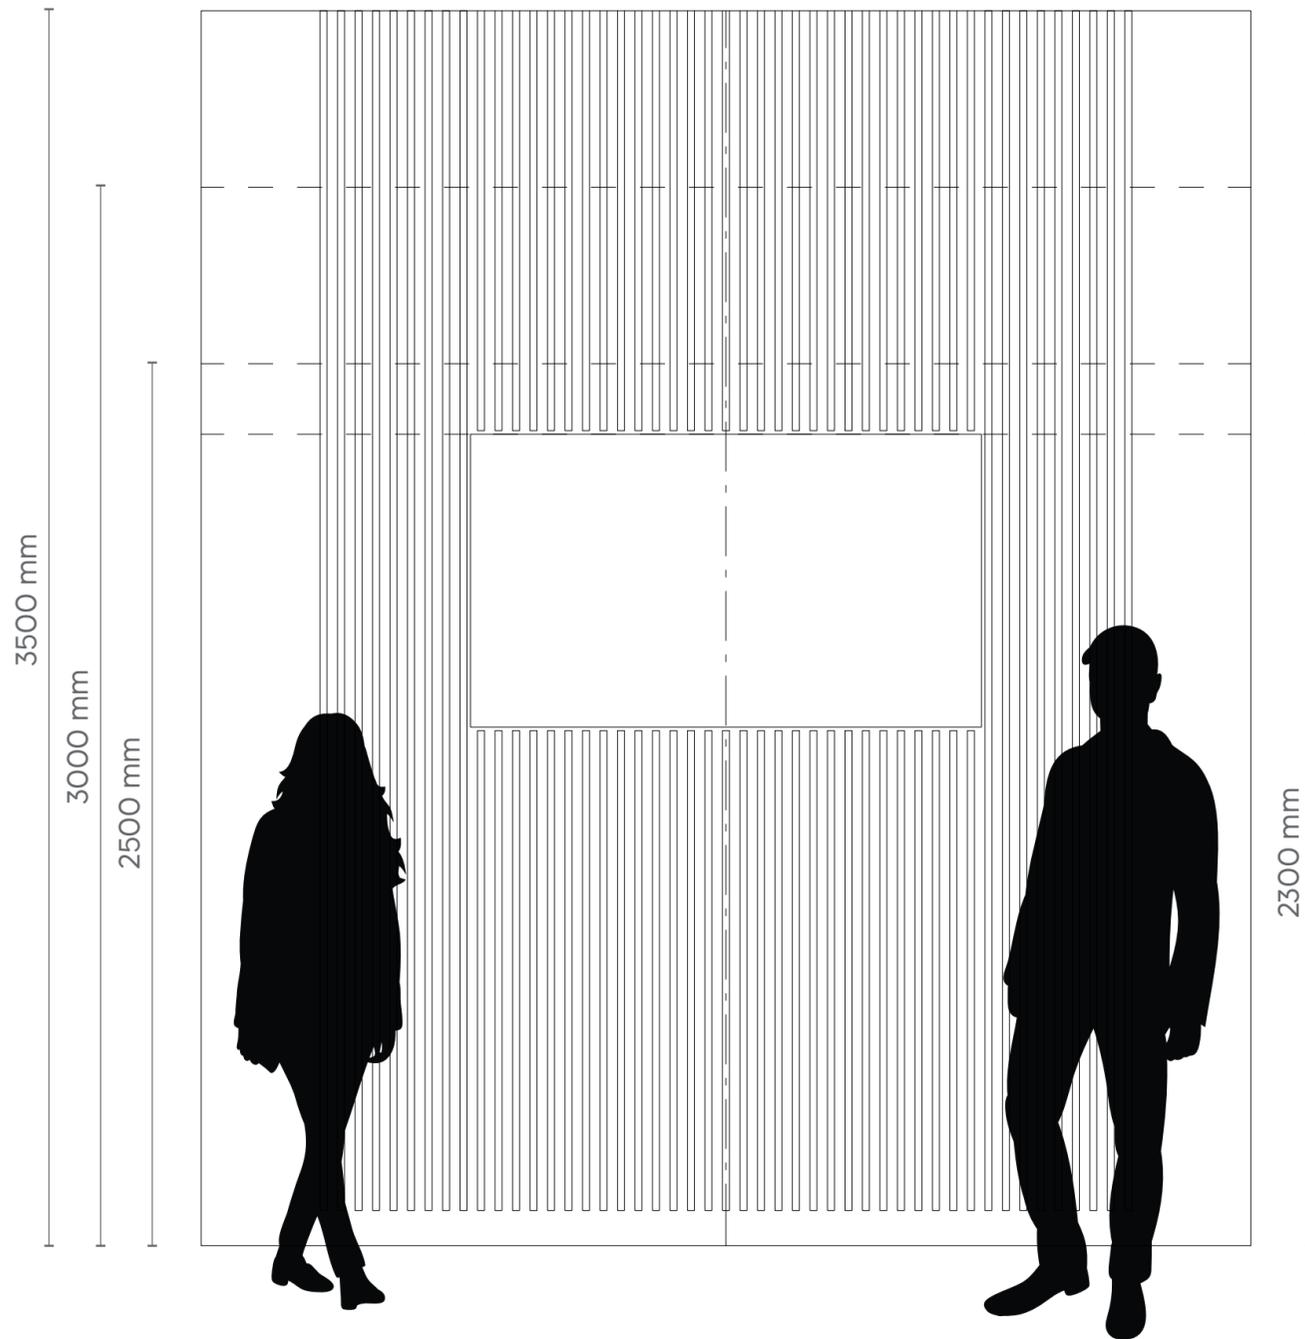

When furnishing a smaller branch and no wall is suitable or large enough for a display 65", we install it on the wall behind the cash desk.

Top edge height from floor: 2300 mm

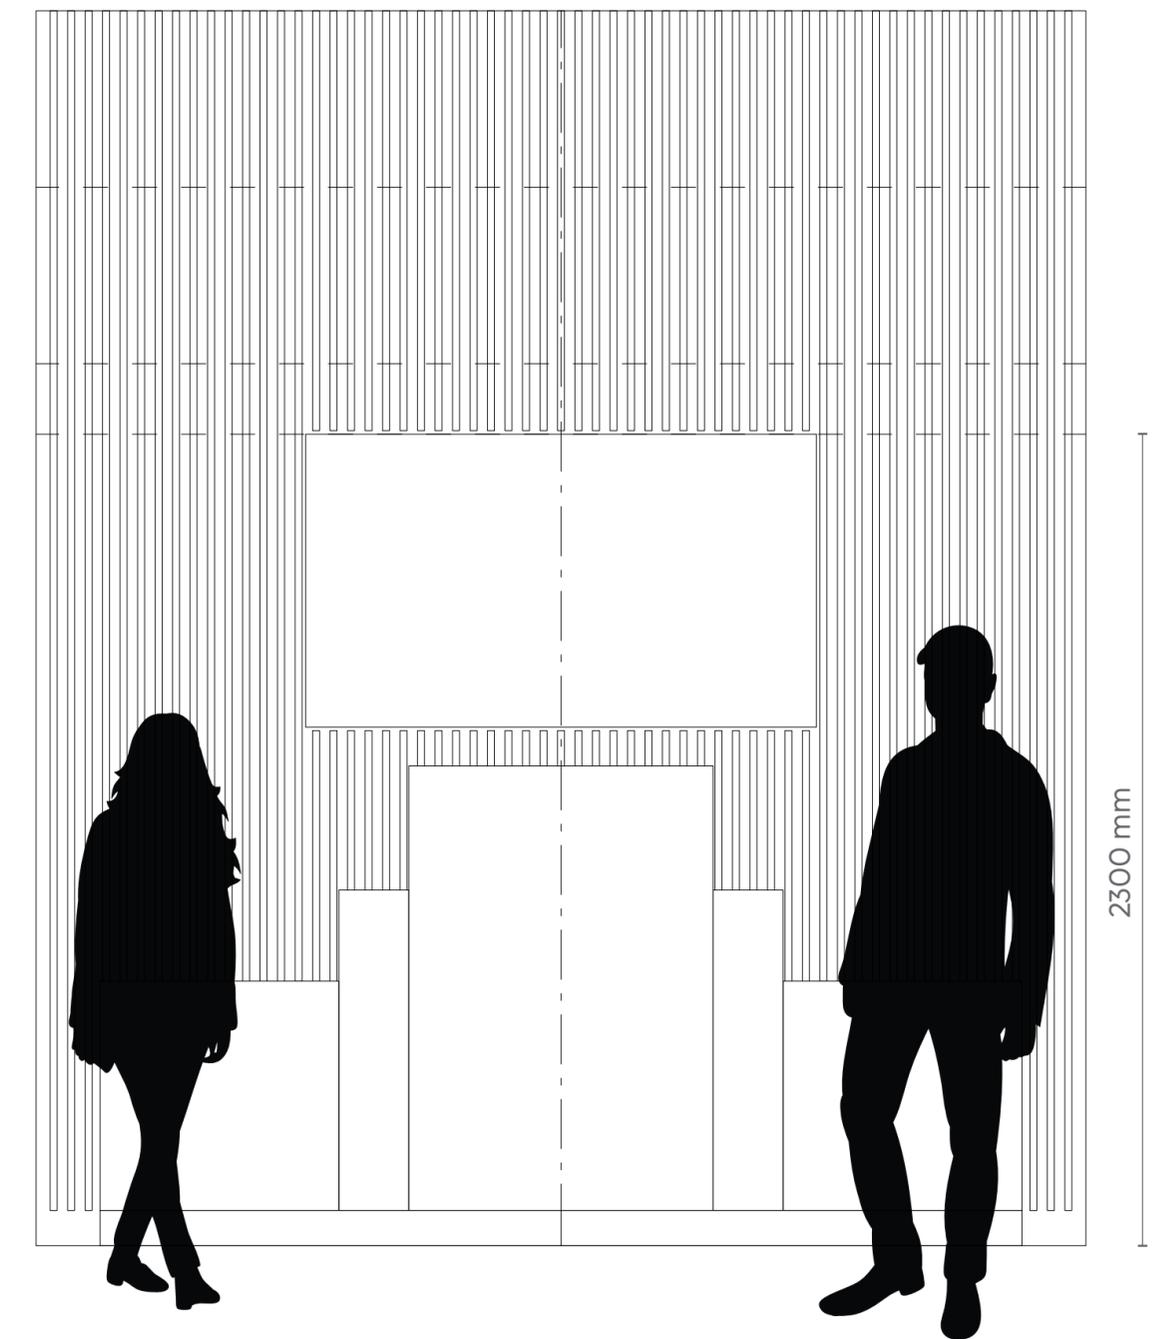

**Note:**

These are general recommendations; specific spaces may require adjustments.

Wall-mounted display

Cash desk – wall-mounted display

# Spaces in the branch

Cash desk

Office

Vestibule/ATM lobby

## Cash desk

- 1 Workplace number
- 2 Service description and branding

## Cash desk

We equip the cash desk in accordance with the visualisation on the left.

### Elements:

- 1 workplace number
- 2 branding
- 3 service description

- To make orientation easier, we mark the workplace with a number.
- For branding, we place the outline sign on the wall behind the cash desk.
- If a workplace description is required, the wall is equipped with text made of acrylic.

# Cash desk

## Workplace number

We mark the cash desk workplace with a number made of 5 mm clear acrylic, backed with the specified indigo-blue foil, onto which a thin layer (0.5 mm) of PVC is applied.

The entire element is affixed to the cash desk in accordance with the prescribed rules shown in the visualisation on the right.

**Font:** CocoSharp Bold

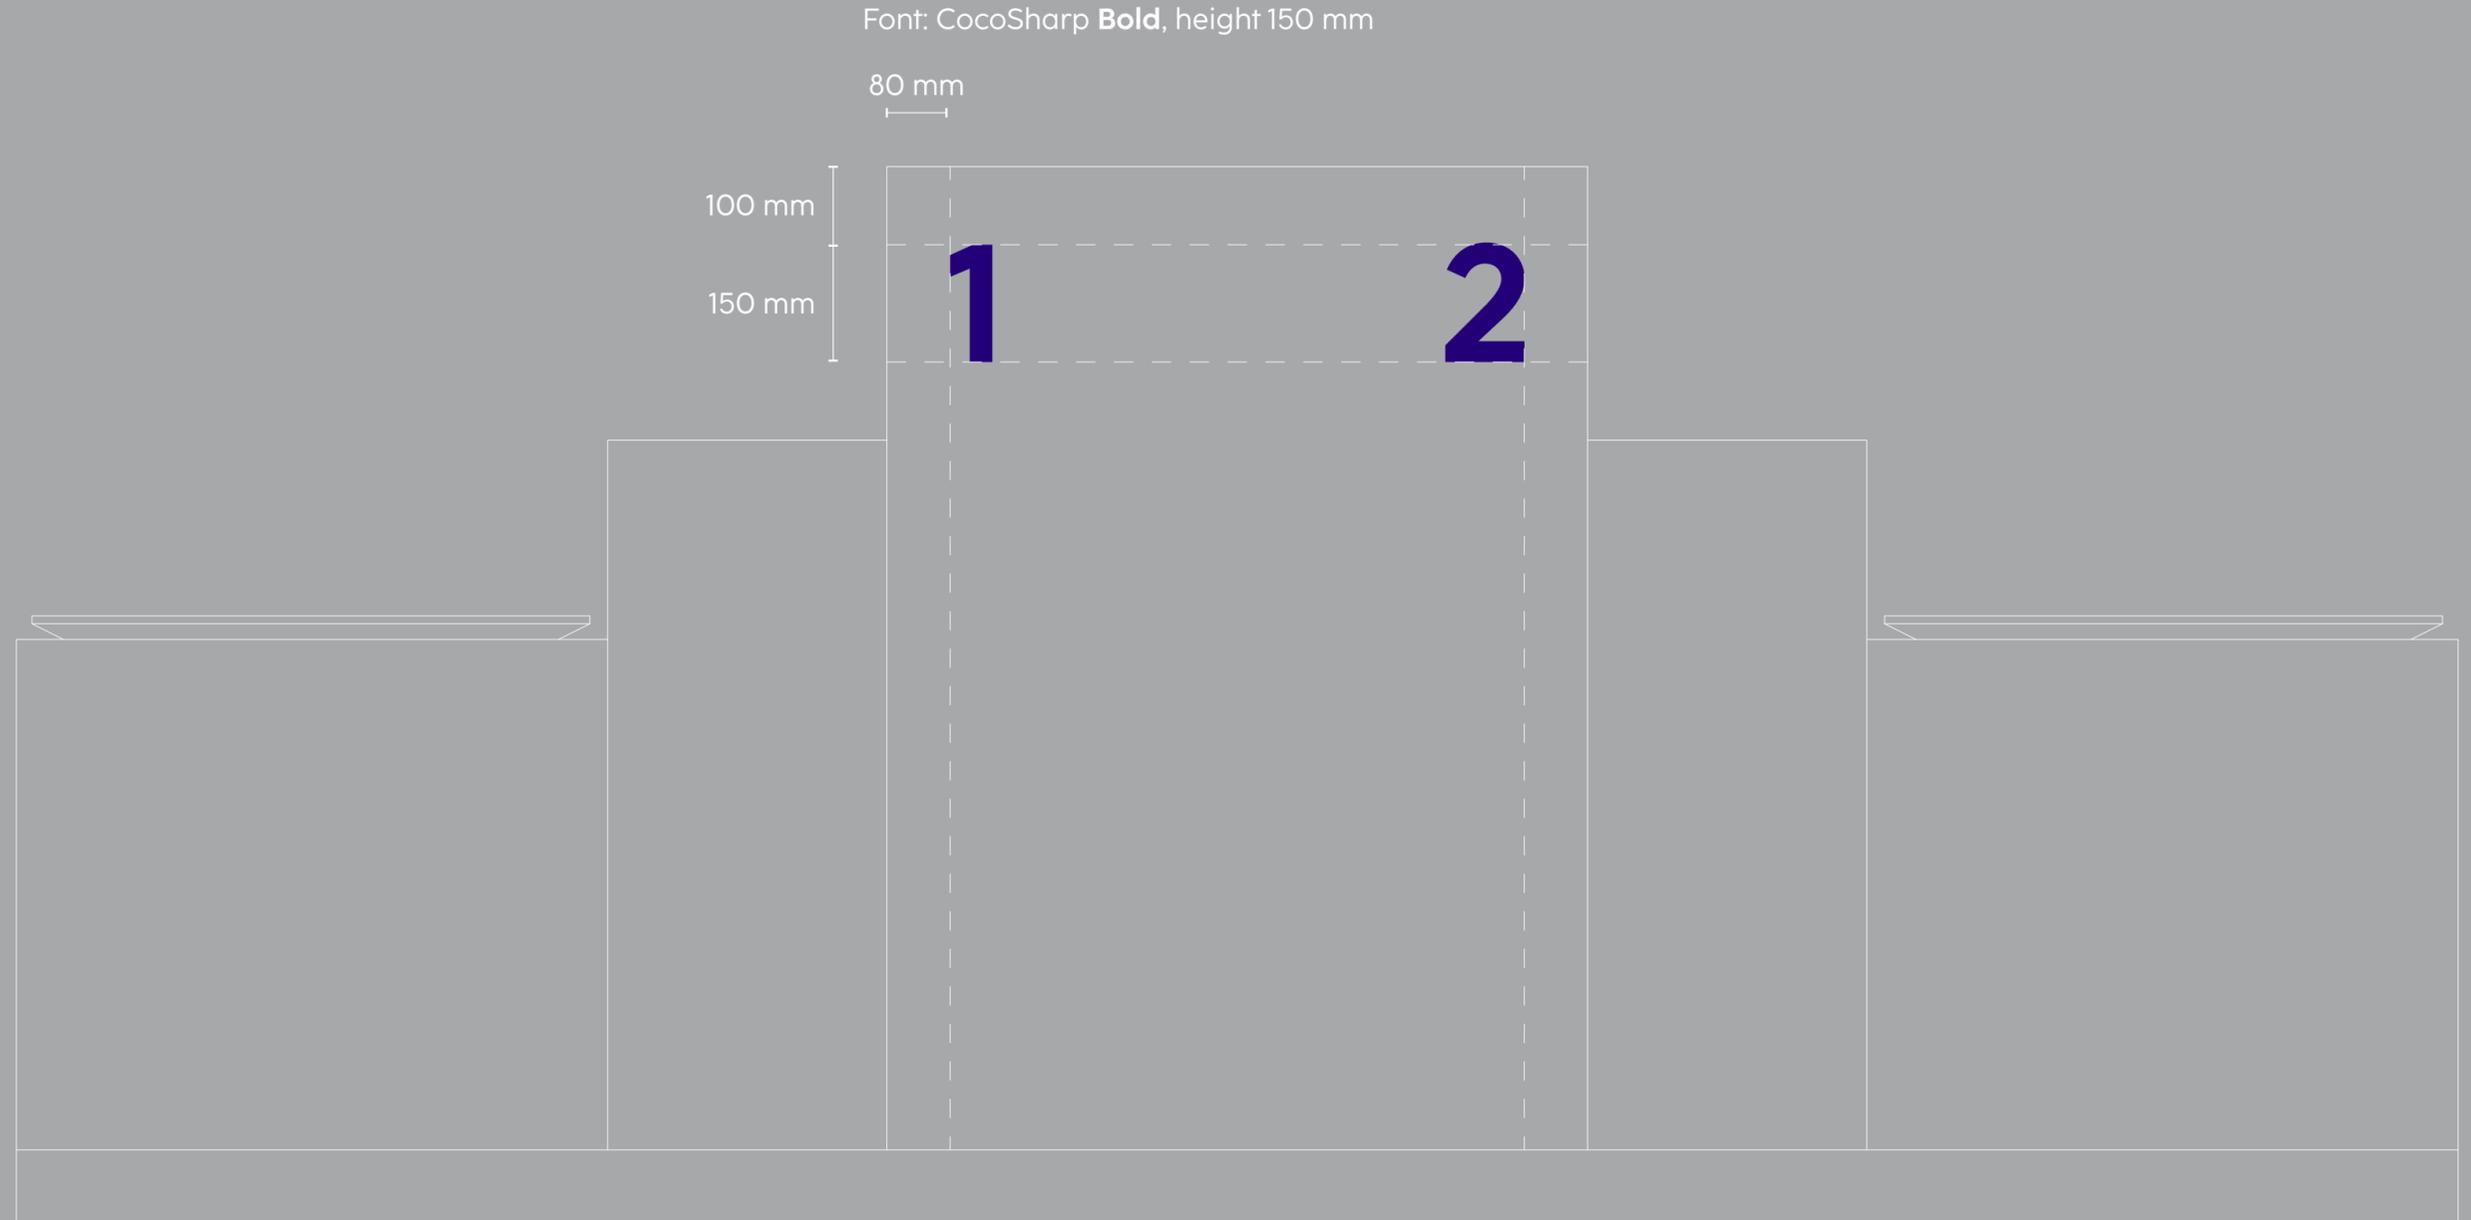

**Number height:** 150 mm

**Material:**

- 5 mm clear acrylic with HX20281B foil applied to the reverse side, backed with 0.5 mm PVC + double-sided adhesive tape.

**Note:**

For a flat cash desk, the number is not backed with PVC material.

## Cash desk

### Service description and branding

If needed, the wall behind the cash desk is equipped with acrylic text describing the type of service provided.

The top edge of the text is placed 2200 mm from the floor, and the height of each text line is 100 mm. If there are multiple lines, the spacing between them is 100 mm. All additional text lines are placed below the top one, following the same rule.

For easier installation, the text is mounted on transparent acrylic backing. It is offset from the wall with 20 mm spacers.

**Font:** CocoSharp Bold

**Text height:** 100 mm

**Material:**

- 5 mm transparent acrylic backing,
- white opaque acrylic letters 3 mm,
- 20 mm spacers.

**Note:**

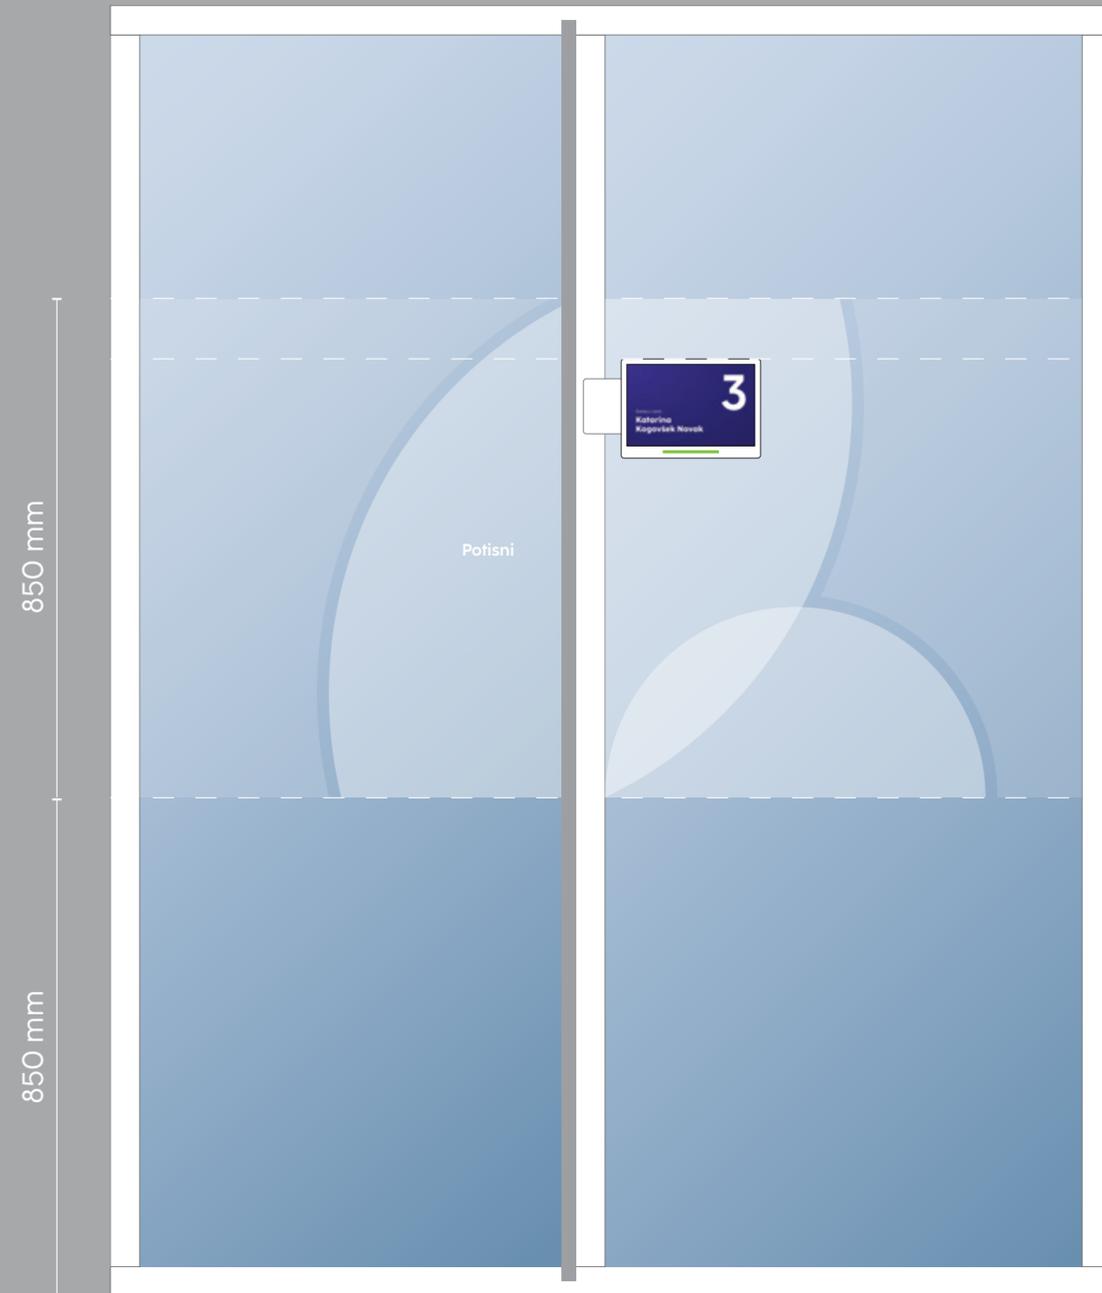

- These are general recommendations; specific spaces may require adjustments.
- The positioning of the text and outline sign is described on page 13.

## **Vestibule/ATM lobby**

- 1 Vestibule without ATM**
- 2 Vestibule with an ATM/ATM lobby**
- 3 Vestibule with CDS**
- 4 Schematic representation of elements**

## Vestibule

### Without ATM

When the vestibule does not contain ATMs, it can be fitted out in various ways:

#### Wall equipment:

- One of the walls is equipped with an indigo blue surface with an outline sign or with a green wall (artificial greenery) with an outline sign,
- Another wall may be equipped with a communication message.
- A third wall can be fitted with wooden cladding to add warmth and a natural character to the space.

#### Decorative elements:

- If the indigo blue cover/background is selected, decorative ceiling elements can be added.
- If the wall is finished with greenery, no additional elements are needed.

#### Additional glass surfaces

If the vestibule includes an additional glass wall, it is fitted with a display 43" for displaying promotional content.

## Vestibule/ATM lobby

### With ATM

When the vestibule contains ATMs, it can be equipped in various ways:

#### Wall equipment:

- If the ATM wall is covered with an indigo blue background, the other wall remains neutral or is equipped with a communication message.
- The other wall can also be equipped with wooden cladding, adding warmth and a natural character to the space.
- If the ATM wall is equipped with ATM masks (and not with an indigo blue background), the other wall is covered with an indigo blue background, to which the outline sign is added as a recognisable branding element.

#### Decorative elements:

Decorative ceiling elements can be suspended from the ceiling.

#### Additional glass surfaces

If the vestibule includes an additional glass wall, it is fitted with a display 43" for displaying promotional content.

## Vestibule/ATM lobby

### With CDS machine

The CDS is designed as a small enclosed space within the vestibule, where customers can enter and complete their transaction in privacy.

The CDS area is located in a vestibule with an ATM; therefore, the same recommendations for ATM vestibules apply.

#### Doors and glass surfaces of the CDS area:

- The doors and glass surfaces are fitted with a sandblasted film strip, applied to the inside of the glass. The bottom edge of the strip is positioned 600 mm above the floor, and the top edge at 1800 mm.
- The door features a sign made of transparent acrylic, backed with indigo blue film. The CDS sign height is 100 mm.

# Vestibule/ATM lobby

## Vestibule/ATM lobby

ATM mask

## Vestibule/ATM lobby

### ATM mask

The ATM mask can be made in two ways:

- polycarbonate mask
- PVC mask

### Polycarbonate

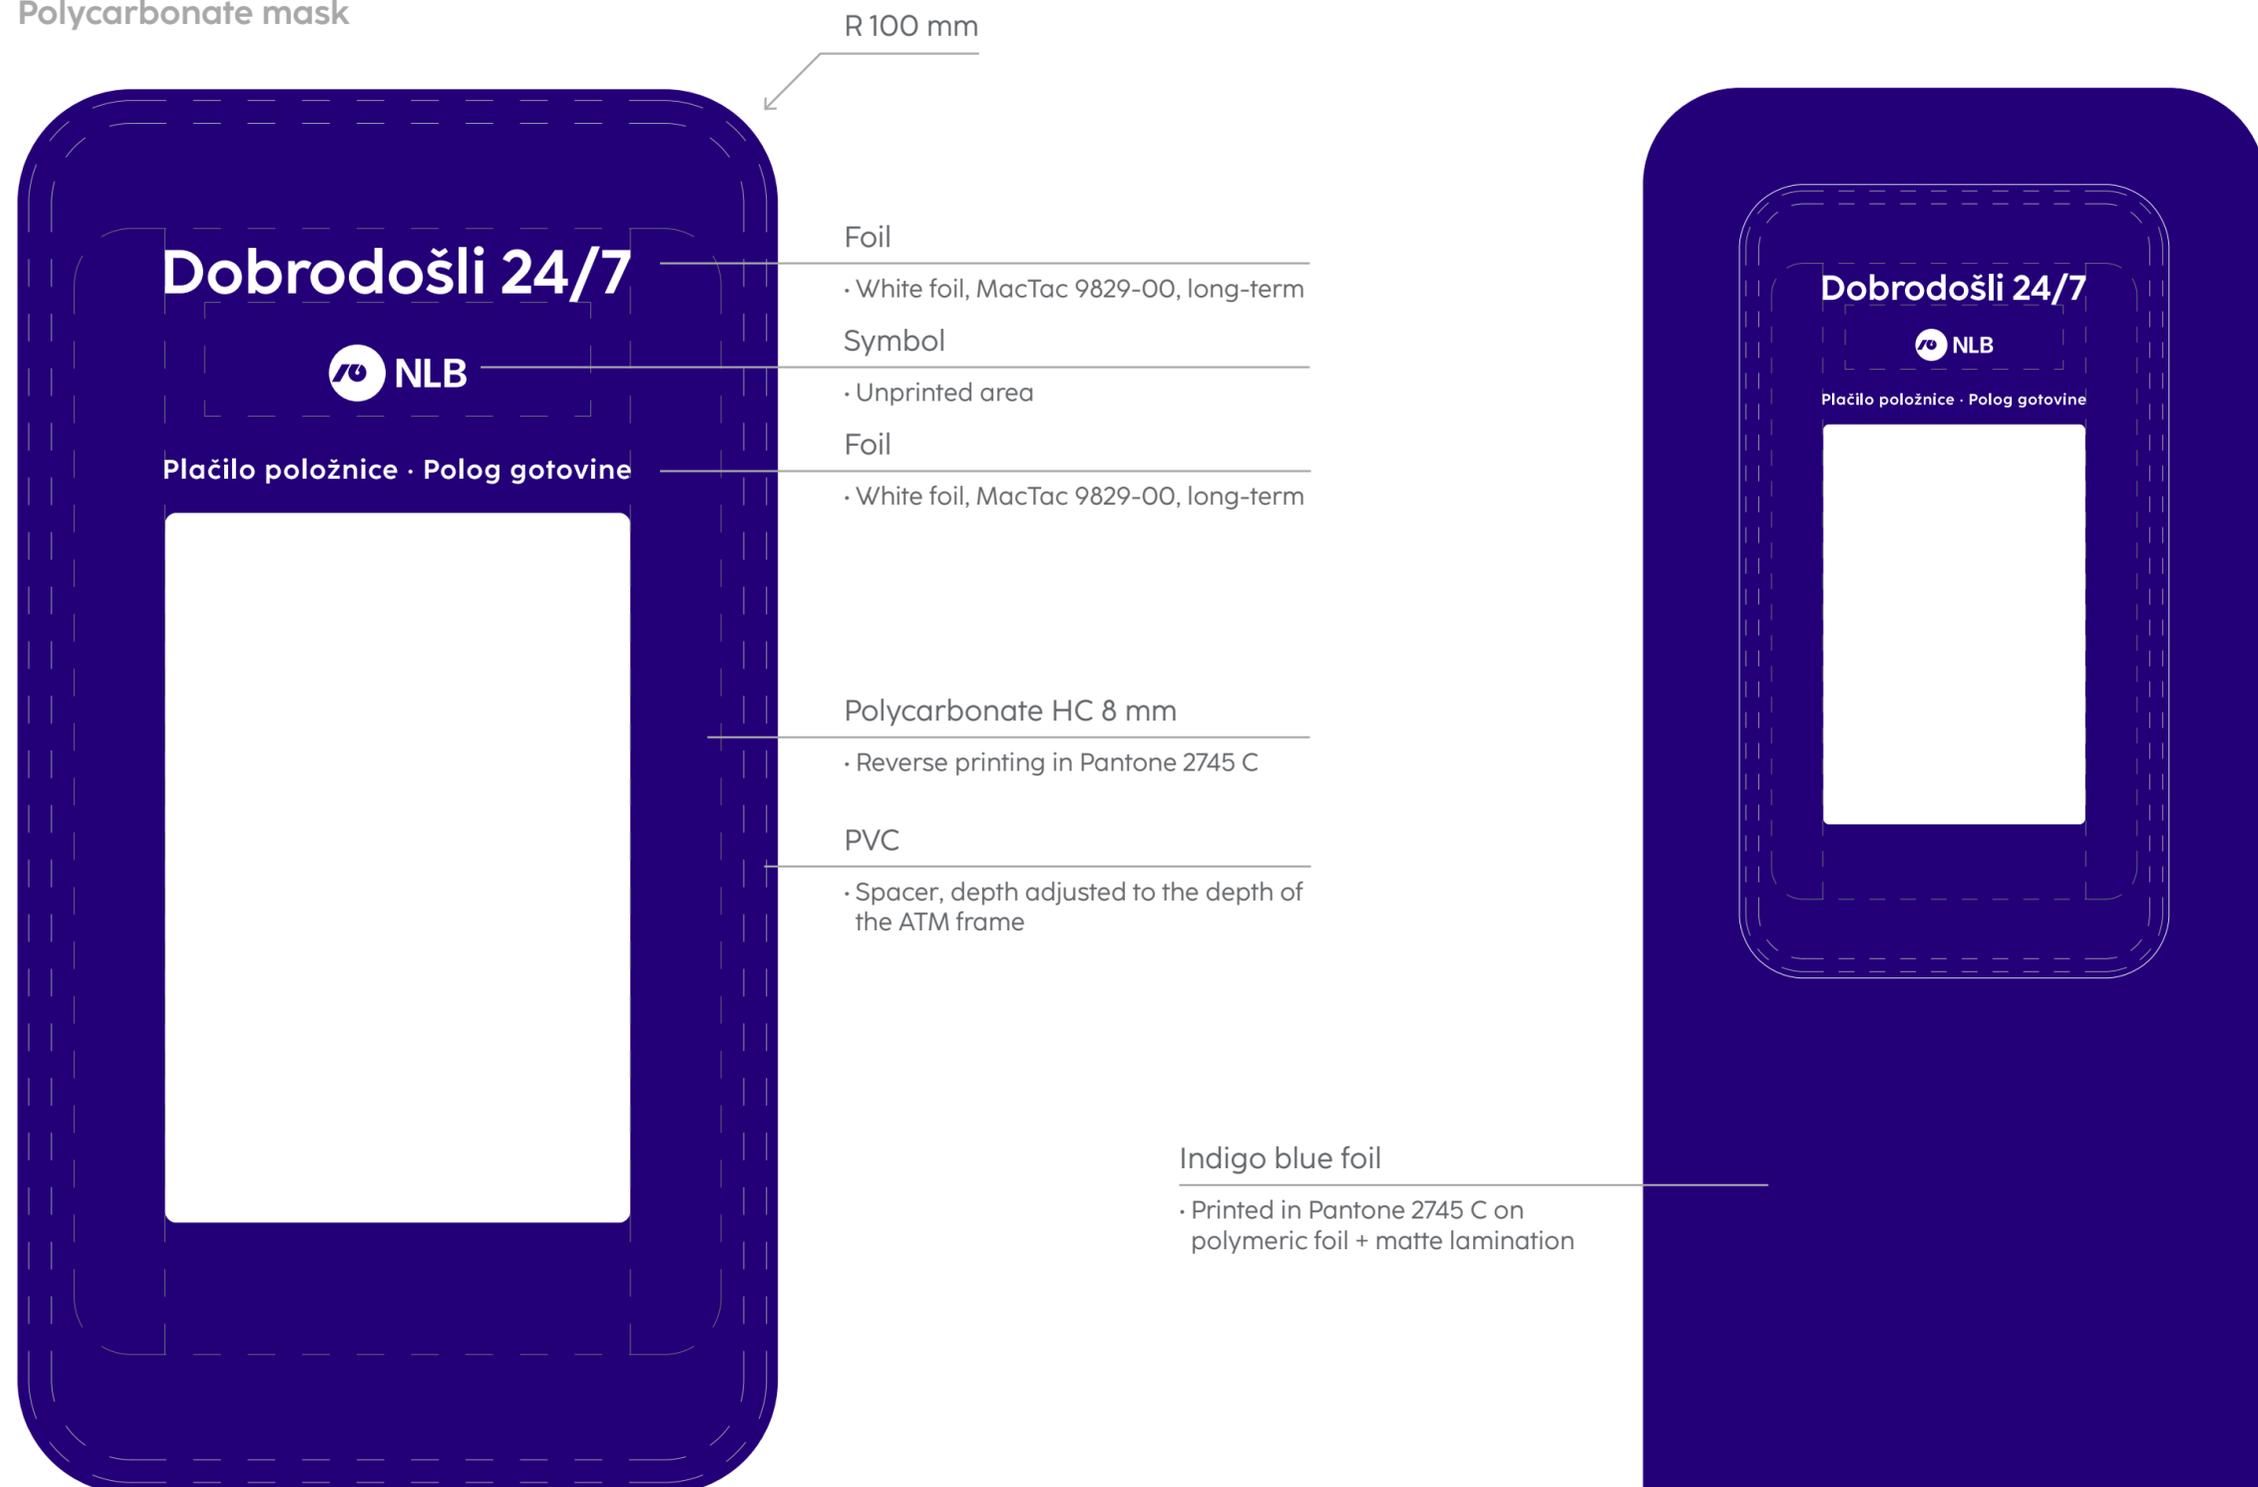

HC polycarbonate, 8 mm thick, is printed on the reverse side. The area of the ATM light panel symbol is left unprinted, allowing the removal of the illuminated symbol sticker and creating a unified and modern appearance of the ATM.

If needed, the front housing of the ATM is covered with white foil. For installation and to cover the existing ATM frame, an additional frame is made from white PVC matching the thickness of the ATM frame. This frame is mounted onto the surface surrounding the ATM.

### Note:

For maintenance purposes, the surface beneath the mask is covered with indigo blue foil.

### Polycarbonate mask

## Vestibule/ATM lobby

### ATM mask

#### PVC

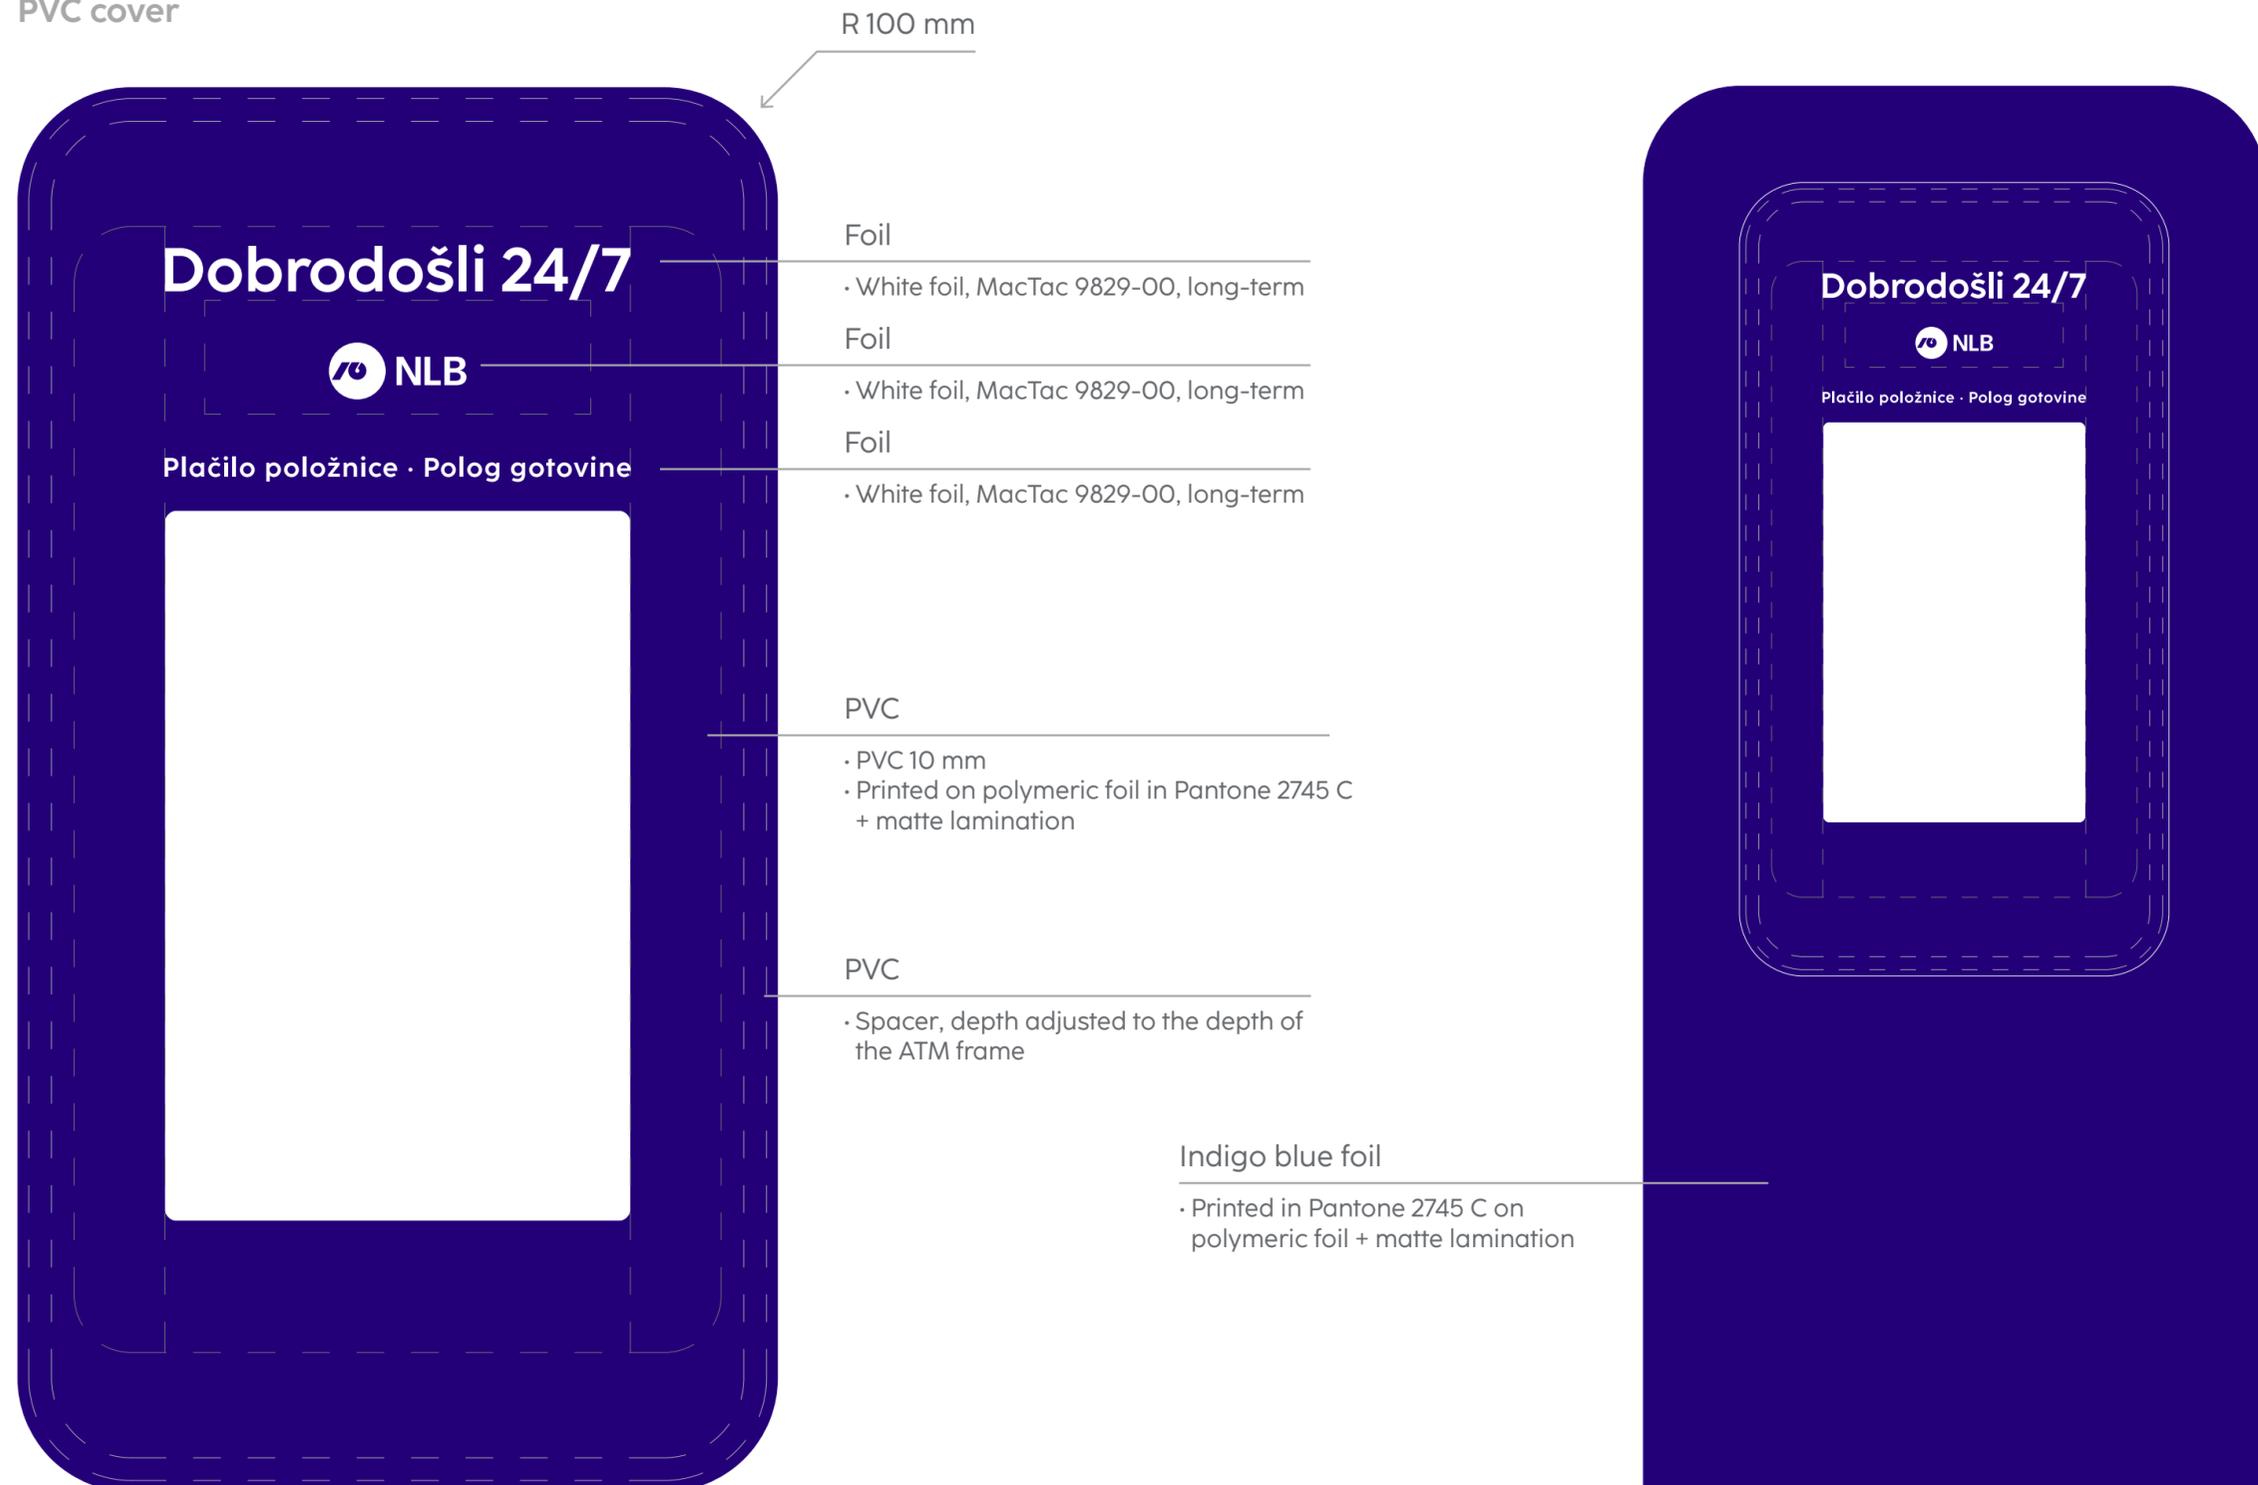

The PVC mask is made entirely of PVC material. A printed film is applied to its front side, additionally complemented with elements made of white foil.

The PVC mask includes a spacer, manufactured in the same way as the polycarbonate mask.

#### Note:

For maintenance purposes, the surface underneath the mask is covered with indigo blue foil.

PVC cover

## Vestibule/ATM lobby

Decorative ceiling element

# Vestibule/ATM lobby

## Decorative ceiling element

The element is made of PVC, with a total thickness of 19 mm, incorporating an aluminium substructure with hangers. Artificial greenery is attached to the top side of the circle, creating the effect of natural foliage.

### Installation

- The circle is suspended from three points, converging into a single hanging point on the ceiling.
- It is fixed to the ceiling using a system that ensures safety and stability.
- The lowest point of the circle must be no less than 2500 mm above the floor.

### Materials

- PVC 19 mm with integrated aluminium substructure and hangers + steel wire
- Artificial greenery

### Sizes

- Large: Ø 1200 mm
- Medium: Ø 1000 mm
- Small: Ø 800 mm
